Warning: risks of traditional and fractional investments in real estate

Purchasing real estate or trading in digital assets, particularly crypto-currencies, involves the potential for profit as well as the risk of loss. This may vastly exceed the amount of money you commit to any trade or transaction. Movements in the price of real estate markets, volatility of crypto-currencies together with movements of foreign exchange rates are all influenced by a variety of factors of global origin, many of which are unpredictable. Violent movements in the price of crypto-tokens and foreign exchange rates may result in action by the market. As a result you may be unable to settle your gains and you will generate losses instead. Our staff is unable to guarantee the accuracy of any market predictions (should they offer such predictions) and cannot guarantee a maximum loss that you may suffer.
